The Problem With Math Is English

Why So Many Students Struggle With Math

Math is a difficult subject for many students. In fact, a recent study found that only 35% of eighth graders are proficient in math. This means that over two-thirds of our students are struggling with math.

So what's the problem? Why are so many students struggling with math?

The answer, I believe, lies in the way math is taught. Traditional math instruction focuses on memorizing rules and procedures. Students are taught to memorize the steps involved in solving a math problem, but they don't always understand why those steps work.

This approach to teaching math is ineffective for many students. They may be able to memorize the steps, but they don't understand the concepts behind those steps. As a result, they can't apply what they've learned to new situations.

The Problem With Math Is English argues that the problem with math is not with math itself, but with the way it is taught. The book offers a new approach to teaching math that focuses on understanding concepts rather than memorizing rules.

This approach to teaching math is more effective for students because it helps them to understand why math works. They can see how the different concepts are connected, and they can apply what they've learned to new situations.

If you're struggling with math, I encourage you to read The Problem With Math Is English. It may just change the way you think about math.

What's Inside The Problem With Math Is English?

The Problem With Math Is English is divided into three parts.

1. Part 1: The Problem

In this part, I explain why traditional math instruction is ineffective for many students. I also discuss the different ways that students can learn math.

2. Part 2: The Solution

In this part, I offer a new approach to teaching math that focuses on understanding concepts rather than memorizing rules. I also provide specific examples of how this approach can be used to teach different math topics.

3. Part 3: The Future of Math Education

In this part, I discuss the future of math education. I argue that we need to move away from traditional math instruction and adopt a more conceptual approach.
